Trailer
“Ancient Relics”

While compiling the music for our senior film, “Ancient Relics”, I had to listen & learn to enjoy a new genre. I initially wanted to compose the music by telling the story with each character having their own instrument. My inspiration for this method was the story of “Peter & The Wolf”. It was one of the first stories I heard as a child.

My goal was to try & recreate that method somehow in this movie. I wanted to display an eerie feel, to try to compel the viewer to see this movie. I went with deep, orchestrated strings to intensify the scenes and the quick cuts they make. I wanted to craft a Harry Potter inspired theme with the music. I found various Acid loops and was able to piece them together to make a frantic, energetic mix that makes the movie more than what it was.

So my plan for this will be to retrieve the trailer from someone who worked on the project with me & follow the same processes & practices I used to complete the whole movie. I plan on sharpening the dialogue, creating certain sound effects on certain parts, either through www.freesound.org or through use of Foley, & creating only a few seconds worth of original music. I know that there will be multiple sessions of data that all need to be created & compiled separately to ensure that every sound is at its fullest potential when it is all put together.

As far as this trailer goes, if the dialogue sounds well enough to work with, then I shouldn't have to utilize the main studio. However, in order to secure good SFX, foley may or may not be required. In which case, I would utilize the foley lab.

After everything is done, I plan to use this on my professional website & part of my demo reel.
